Patron SFS

Sump Pump Float Switch, 20ft

Item Number: PA-SFS

The Patron SFS tethered float switch is an essential accessory for submersible pumps, designed to efficiently control water levels in various applications. This reliable float switch features a tethered design, allowing it to move freely with changing water levels to activate or deactivate the pump as needed. Its user-friendly design ensures easy installation and dependable operation, providing an effective solution for automatic pump control. With the Patron SFS tethered float switch, users can optimize pump performance, prevent overflow, and streamline water management processes.
